PROBLEM STATEMENT:

BANK MANAGEMENT SYSTEM

BANK MANAGEMENT SYSTEM undertaken as a project is based on relevant technologies. The main aim of this project is to develop software for bank management system. This project is to develop software for bank management system. This project has been developed to carry out the processes easily and quickly, which is not possible with the manual systems, which are overcome by this software. This project is developed using VB language and. Hence it provides the complete solution for the current management system.

METHODOLOGY / PROCEDURE:

The Bank Account Management System is an application for maintaining a person's account in a bank. In this project I tried to show the working of a banking account system and cover the basic functionality of a Bank Account Management System. To develop a project for solving financial applications of a customer in banking environment in order to nurture the needs of an end banking user by providing various ways to perform banking tasks. Also to enable the user's work space to have additional functionalities which are not provided under a conventional banking project. The Bank Account Management System undertaken as a project is based on relevant technologies. The main aim of this project is to develop software for Bank Account Management System. This project has been developed to carry out the processes easily and quickly, which is not possible with the manual systems, which are overcome by this software. Creating and managing requirements is a challenge of IT, systems and product development projects or indeed for any activity where you have to manage a contractual relationship. Organization need to effectively define and manage requirements to ensure they are meeting needs of the customer, while proving

compliance and staying on the schedule and within budget. The impact of a poorly expressed requirement can bring a business out of compliance or even cause injury or death. Requirements definition and management is an activity that can deliver a high, fast return on investment. The project analyzes the system requirements and then comes up with the requirements specifications. It studies other related systems and then come up with system specifications. The system is then designed in accordance with specifications to satisfy the requirements. The system is designed as an interactive and content management system. The content management system deals with data entry, validation confirm and updating whiles the interactive system deals with system interaction with the administration and users. Thus, above features of this project will save transaction time and therefore increase the efficiency of the system.

RESULT:

➤ The Main Page

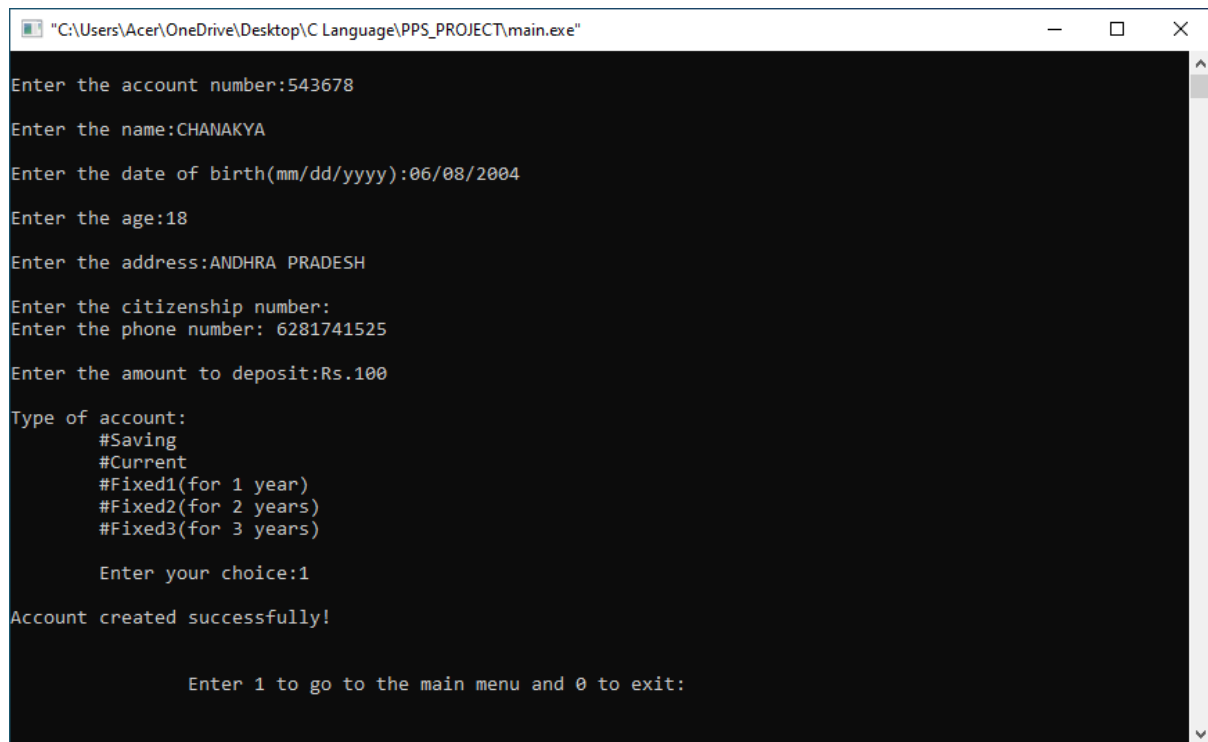

Enter the password **SRM** to enter

➤ After Login

➤ Choosing 1

```
"C:\Users\Acer\OneDrive\Desktop\PPS_PROJECT\main.exe"

Enter the account number:543678
Enter the name:CHANAKYA
Enter the date of birth(mm/dd/yyyy):06/08/2004
Enter the age:18
Enter the address:ANDHRA PRADESH
Enter the citizenship number:
Enter the phone number: 6281741525
Enter the amount to deposit:Rs.100

Type of account:
#Saving
#Current
#Fixed1(for 1 year)
#Fixed2(for 2 years)
#Fixed3(for 3 years)

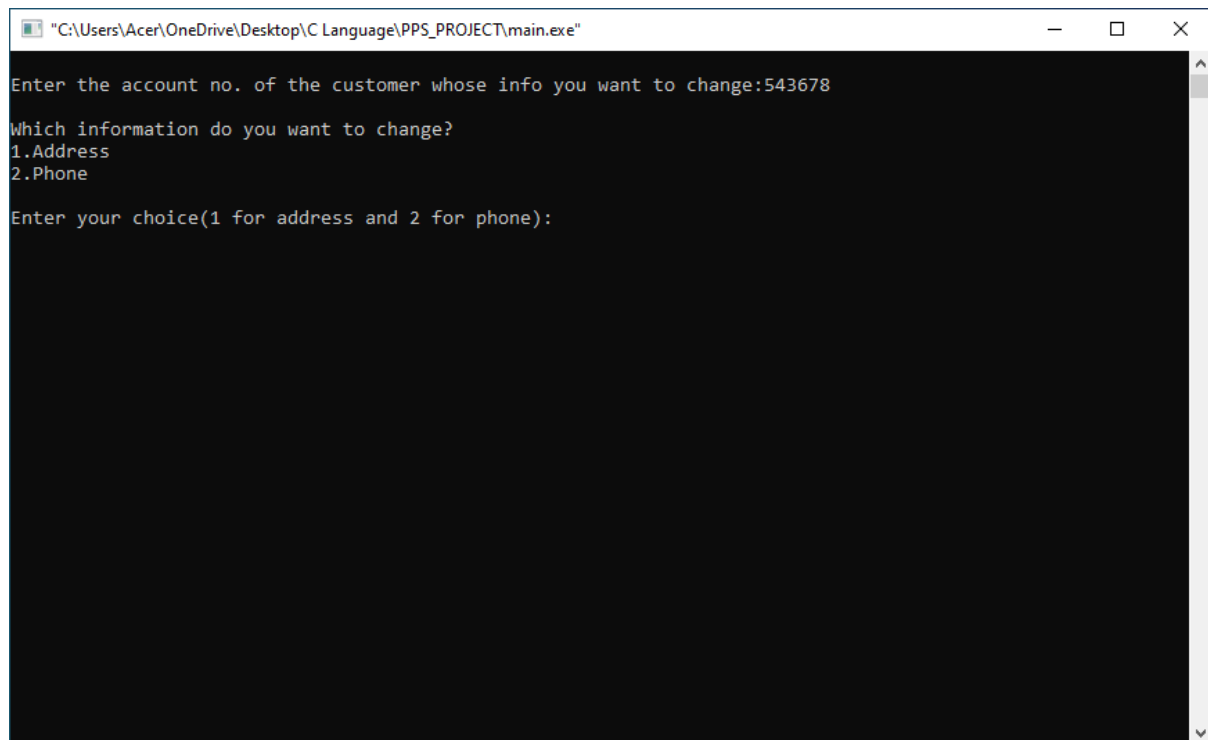

Enter your choice:1

Account created successfully!

Enter 1 to go to the main menu and 0 to exit:
```

After filling the details

➤ Choosing 2

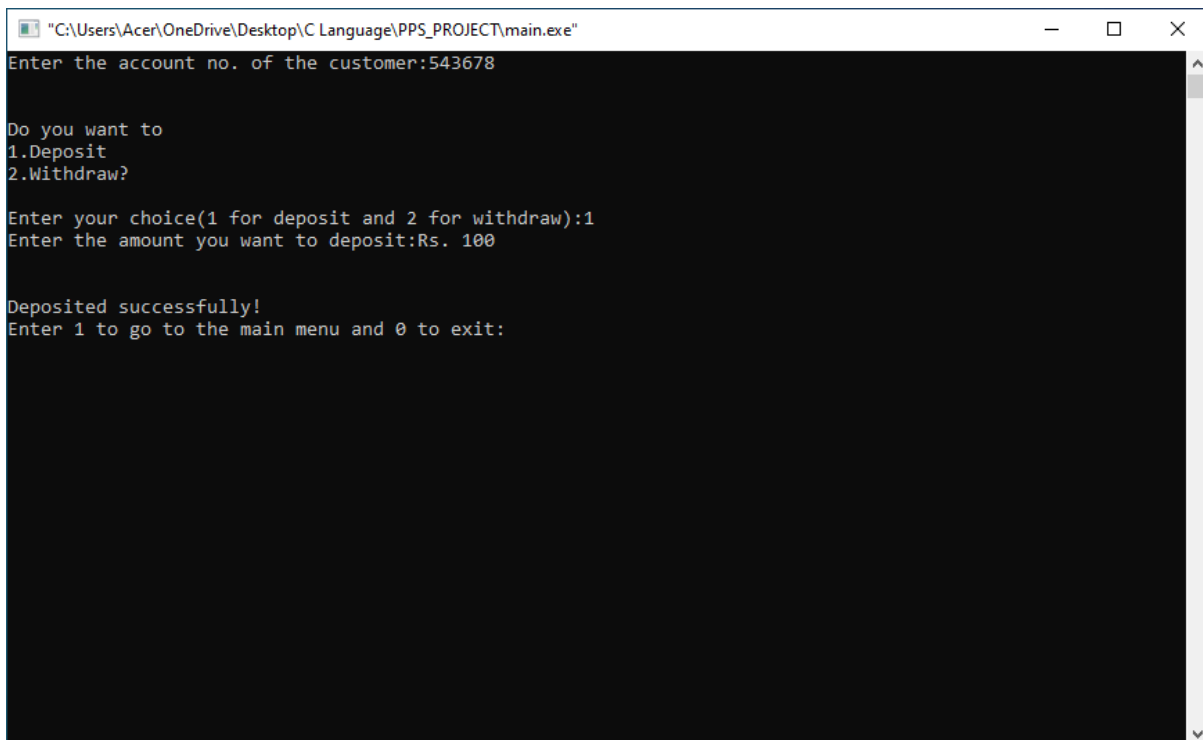

```
"C:\Users\Acer\OneDrive\Desktop\PPS_PROJECT\main.exe"

Enter the account no. of the customer whose info you want to change:543678

Which information do you want to change?
1.Address
2.Phone

Enter your choice(1 for address and 2 for phone):
```

➤ Choosing 3

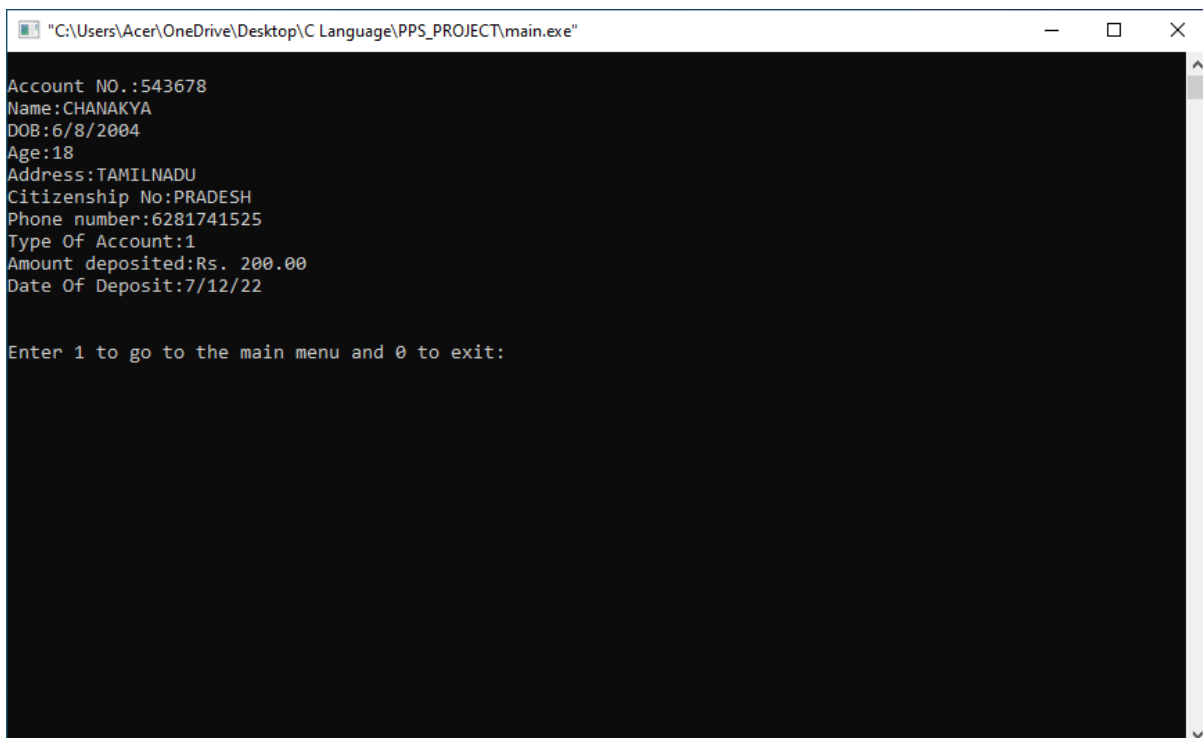

```
"C:\Users\Acer\OneDrive\Desktop\C Language\PPS_PROJECT\main.exe"
Enter the account no. of the customer:543678

Do you want to
1.Deposit
2.Withdraw?

Enter your choice(1 for deposit and 2 for withdraw):1
Enter the amount you want to deposit:Rs. 100

Deposited successfully!
Enter 1 to go to the main menu and 0 to exit:
```

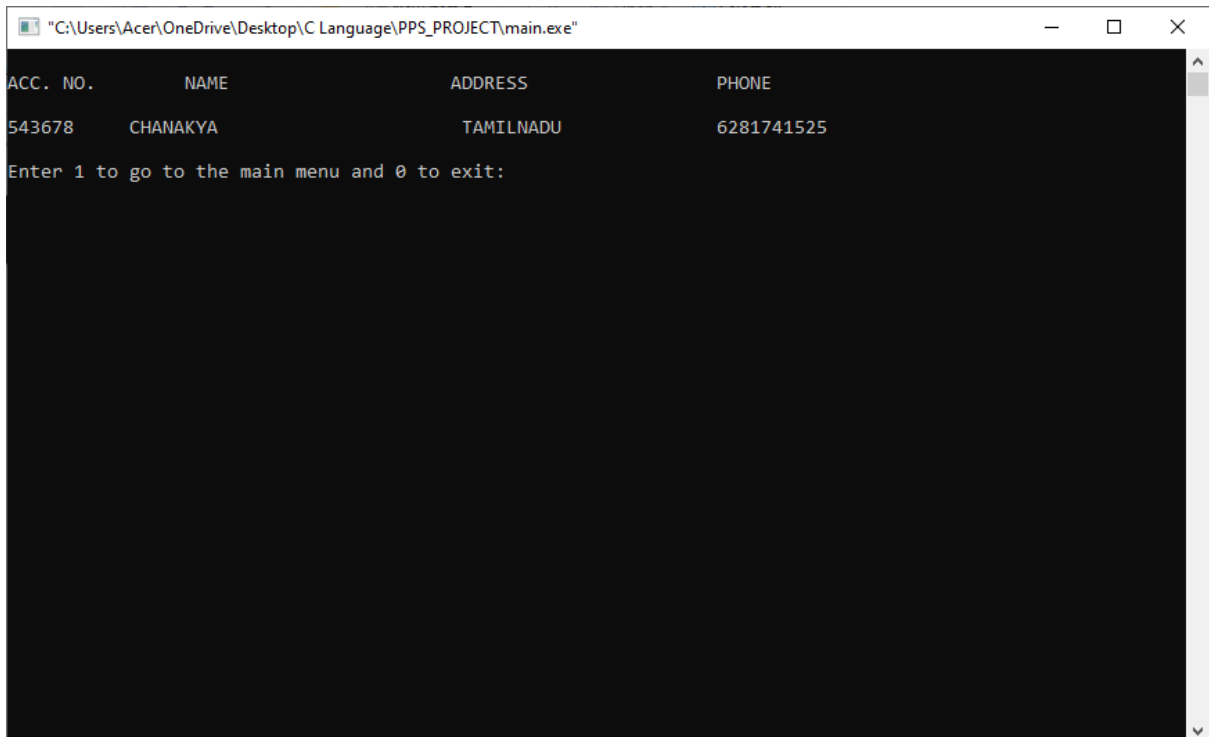

➤ Choosing 4

```
"C:\Users\Acer\OneDrive\Desktop\C Language\PPS_PROJECT\main.exe"
Account NO.:543678
Name:CHANAKYA
DOB:6/8/2004
Age:18
Address:TAMILNADU
Citizenship No:PRADESH
Phone number:6281741525
Type Of Account:1
Amount deposited:Rs. 200.00
Date Of Deposit:7/12/22

Enter 1 to go to the main menu and 0 to exit:
```

➤ Choosing 6

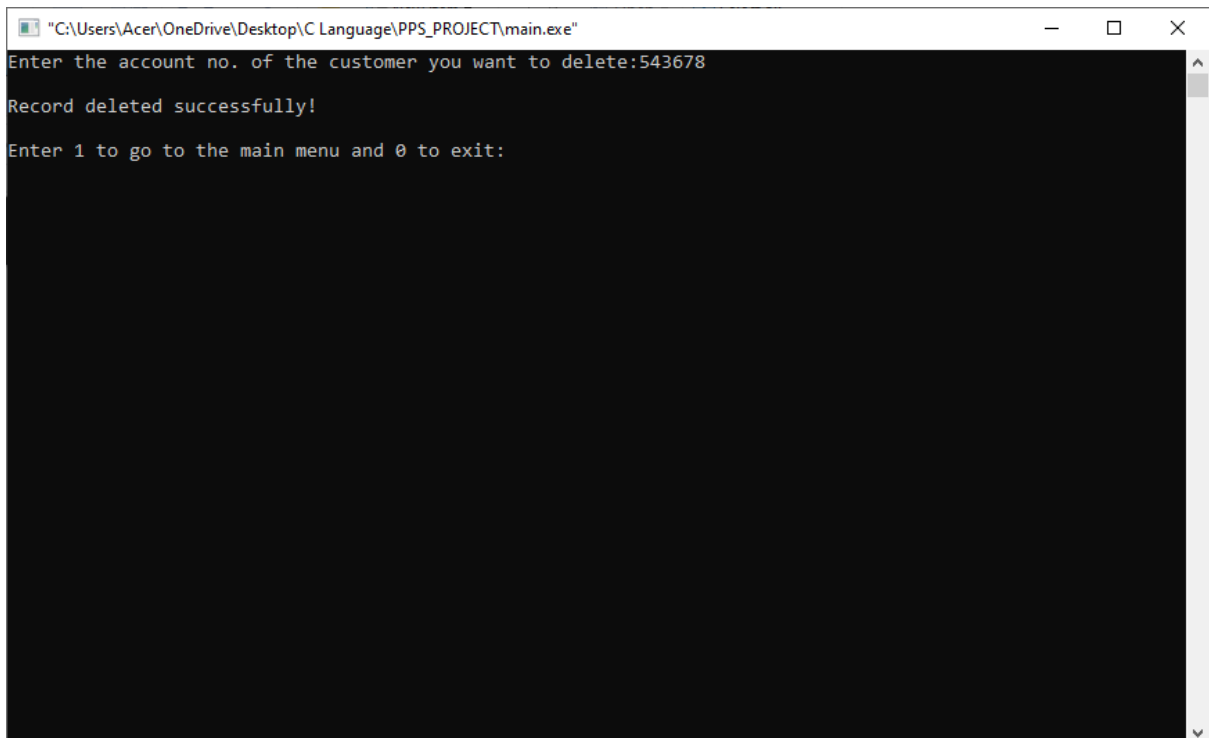

A screenshot of a Windows command prompt window titled "C:\Users\Acer\OneDrive\Desktop\C Language\PPS_PROJECT\main.exe". The window displays a table with four columns: ACC. NO., NAME, ADDRESS, and PHONE. The first row of data shows account number 543678, name CHANAKYA, address TAMILNADU, and phone number 6281741525. Below the table, the text "Enter 1 to go to the main menu and 0 to exit:" is displayed.

ACC. NO.	NAME	ADDRESS	PHONE
543678	CHANAKYA	TAMILNADU	6281741525

Enter 1 to go to the main menu and 0 to exit:

➤ Choosing 5

A screenshot of a Windows command prompt window titled "C:\Users\Acer\OneDrive\Desktop\C Language\PPS_PROJECT\main.exe". The window displays the text "Enter the account no. of the customer you want to delete:543678". Below this, the message "Record deleted successfully!" is shown. At the bottom, the text "Enter 1 to go to the main menu and 0 to exit:" is displayed.

Enter the account no. of the customer you want to delete:543678

Record deleted successfully!

Enter 1 to go to the main menu and 0 to exit:

CONCLUSION

The source code for Customer Account Bank Management System is relatively short and easy to understand. I have divided this C mini project into many functions, most of which are related to different banking activities. Listed below are some of the more important functions which may help you understand the project better.

menu() – This function displays the menu or welcome screen to perform different banking activities mentioned below.

new_acc() – This function creates a new customer account. It asks for some personal and banking details of the customer such as name, date of birth, citizenship number, address and phone number. You can enter the amount to deposit and choose one type of deposit account – saving, current, fixed for 1 year, fixed for 2 years or fixed for 3 years.

view list() – With this function, you can view the customer's banking information such as account number, name, address and phone number provided while creating the account.

edit() – This function has been used for changing the address and phone number of a particular customer account.

transact() – With this function, you can deposit and withdraw money to and from a particular customer account.

erase() – This function is for deleting a customer account.

see() – This function shows account number, name, date of birth, citizenship number, age, address, phone number, type of account, amount deposited and date of deposit. It also displays the amount of interest corresponding to a particular account type.

In this bank management system project in C, file handling has been used for almost all functions. File has been used to store data related to new account, transaction, editing of account information and viewing of account information. I haven't used file handling for the menu, interest calculation and password.
